ATRIUM SWING DOORS

A DECADE OF PROVEN PERFORMANCE

Gerkin Windows and Doors is introducing a new line of atrium swing doors for our Comfort Series product line. The new 4 9/16" atrium door combines innovative styling and an engineered design built for energy-efficient performance.

FEATURES

All doors come with stainless steel operator hardware including a full height gear hinge. This hinge design distributes the load stress uniformly along the full length of the door panel which diffuses the wear and tear and eliminates sagging and hinge bind.

All passage and dead-bolt sets are standard. It has a 3-point locking system with a dead-bolt for maximum security. All doors are uniquely weather stripped with a "rain shed" design for maximum protection from the elements.

Sliding screens are included. All screens are made of extruded aluminum and include adjustable steel ball bearing rollers for a finger-tip operation.

The glass thickness is 1" overall and uses Cardinal 366 Low E standard.

All doors come with contemporary looking Satin Nickel finish.

PERFORMANCE SPECIFICATIONS

- 72x80 rough opening
- Design Pressure – 50 PSF
- Performance Grade – R-PG30
- Water – 4.50 lbs
- Air Infiltration - .04
